1. GENERAL INFORMATION

Insurance Company Name	Cigna Health & Life Insurance Company
NAIC Company Code	67369
HIOS Issuer ID	40025
State	California
Market Type	Individual
Proposed Effective Date	01/01/2016
Primary Contact Person and Title	Minhe Yu, FSA, MAAA, Actuarial Manager
Primary Contact Telephone Number	(860) 226-0342
Primary Contact Email	Minhe.Yu@Cigna.com

Scope and Purpose of Filing: Cigna Health & Life Insurance Company (CHLIC) is filing rates for comprehensive major medical products 40025CA002 for individuals & families, to be effective January 1, 2016. The plans represented in this filing will be Guaranteed Issue & Guaranteed Renewable and are to be marketed through brokers, general agents, and directly to consumers as described in the policy form. These plans are attached to an existing product that has been submitted under policy form filing CACHIND012016. This policy form is not subject to medical underwriting. Please note that the content of this filing is intended to be reviewed by an actuary.

2. PROPOSED RATE INCREASE

The proposed weighted average annual rate change by product, without the impact of aging, is provided below. The rate change reflects the weighted average rate change with all terminating plans being mapped into a new plan. Table 1 in Section 21 provides the detailed mapping of terminating 2015 plans to new 2016 plans that was used for the development of the proposed rate change.

2016 HIOS Product ID	40025CA002
Proposed Rate Increase	6.63%

The following factors are the main drivers of the proposed rate change:

- Medical Inflation and unit cost changes of medical services year over year: The underlying claim costs are expected to
 increase from 2015 to 2016, which is reflective of anticipated changes in the prices of medical services, the frequency with
 which consumers utilize services, as well as any changes in network contracts or provider payment mechanisms.
- The non-grandfathered individual marketplace is evolving in light of the material segment changes initiated by the Patient Protection and Affordable Care Act (PPACA), such as the introduction of the guaranteed issue requirement, modified community rating, subsidies, the risk adjustment program, and many other provisions. After consideration for expected risk adjustment transfers and reinsurance recoveries, the single risk pool experience for CHLIC in California was more adverse than assumed in the current rates. As a result, CHLIC's best estimate of the average market-wide morbidity of the covered population has increased compared to 2015.
- Transitional Reinsurance Program Changes: The amount of funding available to offset adverse experience is decreasing from \$6B in 2015 to \$4B in 2016. Consequently, the reduction in claim costs due to the program has decreased, driving an increase in premiums compared to 2015.
- Plan design changes and benefit modifications: Changes have been made to certain plans that are resulting in a decrease in expected cost share and therefore a decrease to premium. All plan designs conform to actuarial value and essential health benefit requirements.

The requested rate change is not the same across all plans. The following factors drive different rate changes by plan:

- Plan design changes and benefit modifications
- Trend leveraging due to member cost sharing provisions
- CHLIC has made refinements to the manual rating methodology and refreshed the claim probability distribution (CPD) used in the development of the cost sharing for its plans based on its most recent group experience, which leads to different cost share and expected claim cost changes among plans

 CHLIC has updated the data and methodology used to project changes to customer utilization patterns as a result of changes in cost sharing

3. EXPERIENCE PERIOD PREMIUM & CLAIMS

a. Paid Through Date: December 31, 2014

b. **Premiums in Experience Period:** Premiums in experience period represent actual 2014 premiums received through 2/28/2015. CHLIC anticipates a PPACA MLR of greater than 80% in 2014 and therefore estimates no MLR rebates payable.

i. Prior to MLR Rebates: \$40,108,845ii. Expected MLR Rebates: Noneiii. Net of MLR Rebates: \$40,108,845

c. Allowed & Incurred Claims:

All claims are processed through CHLIC's claim system. Allowed claims shown below represent the sum of payments made under the policy to healthcare providers.

IBNR claims are calculated using completion factors, which represent the known paid claims as a percent of the estimated total accrual as of a particular lag period after a service month. Completion factors for a given reporting period are developed based on historical run-out patterns, adjusted for actuarial judgment regarding deviance from the average (within a reasonable range based on historical deviance). The methodology used to calculate IBNR does not differ for allowed claims versus incurred claims.

Allowed and incurred claims in the experience period are as follows:

Allowed Claims			
Paid Through 12/31/2014	\$80,147,928		
IBNR	\$9,163,031		
Completed Allowed Claims	\$89,310,959		

Paid & Incurred Claims		
Paid Through 12/31/2014	\$63,594,039	
IBNR	\$7,373,709	
Incurred Claims	\$70,967,748	

4. BENEFIT CATEGORIES

To determine benefit categories, CHLIC uses a combination of Procedure Code and Place of Service to categorize each claim under an appropriate Major Service Category. These categories are defined as follows:

- <u>Inpatient Hospital</u>: Includes non-capitated facility services for medical, surgical, maternity, mental health and substance abuse, skilled nursing, and other services provided in an inpatient facility setting and billed by the facility.
- <u>Outpatient Hospital</u>: Includes non-capitated facility services for surgery, emergency room, lab, radiology, therapy, observation and other services provided in an outpatient facility setting and billed by the facility.
- <u>Professional</u>: Includes non-capitated primary care, specialist, therapy, the professional component of laboratory and radiology, & other professional services, except hospital based professionals whose payments are included in facility fees.
- Other Medical: Includes non-capitated ambulance, home health care, DME, prosthetics, supplies, vision exams, dental services and other services.
- <u>Prescription Drug</u>: Includes drugs dispensed by a pharmacy, net of rebates received from drug manufacturers.

5. PROJECTION FACTORS

The Projection Factors descried below are included in Section II, Worksheet 1 of the URRT.

• <u>Changes in the Morbidity of the Population Insured:</u> Experience was adjusted to account for expected morbidity differences between the underlying experience population and the projected 2016 population. The morbidity adjustment factor accounts

for morbidity drivers specific to CHLIC's single risk pool, including the membership distribution by metal tier. The morbidity adjustment factor also accounts for expected market-wide morbidity changes due to a stronger individual mandate, increased awareness of Individual health insurance products, and pent-up demand which is not expected to continue in 2016.

- <u>Changes in Benefits</u>: The adjustment for changes in benefits was derived by comparing the average manual allowed claim cost for the 2016 product portfolio, weighted by projected 2016 membership by plan, to the average manual allowed claim cost for the 2014 product portfolio, weighted by 2014 CHLIC experience membership by plan. This adjustment captures anticipated changes in average utilization of services due to differences between the average member cost-sharing during the experience period and the expected average member cost-sharing in the projection period.
- Changes in Demographics: An adjustment was made to account for the change in distribution by age and gender between the 2014 underlying experience and the expected 2016 membership. The adjustment factor was developed as the ratio of the membership-weighted average age factor using CHLIC's best-estimate age slope and 2016 projected membership, and a similar factor computed using the 2014 actual membership. An area adjustment was also made to reflect differences between the distribution of membership across rating areas in our experience population and our 2016 projected population.
- Trend Factors: The source data to determine the trend is national group experience adjusted for market-specific differences. Adjustments were made to account for differences in utilization across major service categories and differences in the formulary between group and individual. CHLIC's 2014 single risk pool experience is trended forward two years to 2016. The trend for group is deemed appropriate for use in development of individual rates because the networks constructed for group and individual are similar, and any differences in network are captured by a separate network savings decrement.

6. CREDIBILITY MANUAL RATE DEVELOPMENT

a. Source & Appropriateness of Experience Data used in Developing the Manual Rate

The source data used to generate the Manual Rate is trended national group experience adjusted for state- and market-specific differences. The experience for the national group book of business is deemed appropriate for development of the Manual Rate because the baseline experience was not subject to individual medical underwriting and the benefits for the group experience are similar to the benefits required to be ACA compliant. The adjustments to the baseline data are addressed below.

b. Adjustments made to the Data

The following adjustments were made during development of the Manual Rate to account for differences between the source data and characteristics of the anticipated population in the Individual Market for the proposed period:

- Morbidity Load A 37.9% load was added to the manual rate to account for the difference in morbidity risk of the
 population underlying the manual rate and the anticipated Individual population in 2016. CHLIC relied on full-year 2014
 allowed claims and enrollment data for the Individual market, and a comprehensive projection model from McKinsey &
 Company. The morbidity load comprehends the following components:
 - Overall health status in the Individual marketplace Customers seeking coverage through the Individual market tend to have a different average health status than those who receive coverage through their employer. The average morbidity in the Individual market is driven by external factors such as the strength of the individual mandate, overall awareness of Individual health insurance products, and the presence or absence of transitional policies. All such factors are included in the morbidity load.
 - Membership distribution by metal tier—In the Individual market, individuals tend to select plans that best meet their health needs. Riskier individuals tend to choose plans with lower member cost-share. The expected membership distribution by metal tier therefore impacts the overall expected morbidity in the single risk pool. This adjustment is applied to the index rate only and no plan-specific adjustments are made to account for anticipated differences in health status of enrollees across plans.
- Demographic Adjustment The experience underlying the Manual Rate development does not conform to the 3:1 age slope as prescribed by the ACA. Hence, an adjustment was made to reflect the impact of compression of age slopes as well as to account for the different distribution by age in the 2016 individual market than the distribution by age reflected in the data underlying the Manual Rate.

- Impact of EHB Most EHBs are already represented in the base experience underlying the derivation of the Manual Rate. However, certain EHBs are not represented in the base experience and the impact of covering these benefits is subsequently added to the Manual Rate, resulting in a 0.66% load.
- Network Savings CHLIC's underlying network for its proposed plans in this filing is different from the network underlying the experience used in deriving the Manual Rate. The estimated savings of the provider network vary by geographic region, but are incorporated into the Manual Rate based on assumed enrollment by region as an average 17.5% decrement.
- Pharmacy Formulary Savings Pharmacy claim cost experience used in the development of the Manual Rate is based on national group experience. This group experience is representative of a broader formulary than the formulary associated with CHLIC's individual product. The narrower formulary results in a savings of 29.7% on pharmacy claim costs compared to the Manual Rate.
- Hepatitis C and Specialty Based on evolving experience, we estimate that CHLIC's contracted savings on Hepatitis C drugs will be less favorable than initially built into the manual rate. Also, generic specialty drugs have been moved from the Specialty Drug tier (Tier 4) to the Generic tier (Tier 1) of the formulary. Together these changes resulted in a 5.9% increase to pharmacy claim costs.

c. Inclusion of Capitation Payments

There are no services provided under a capitation arrangement for plans included in this filing.

7. CREDIBILITY OF EXPERIENCE

Limited fluctuation credibility was used to determine the credibility assigned to the 2014 single risk pool experience. 2014 exposure of 100,000 member months was assigned 100% credibility. Therefore, the credibility assigned to 2014 single risk pool experience was 100%

8. PAID TO ALLOWED RATIO

The expected cost-sharing ratio for each benefit plan is calculated by using group experience trended to the proposed filing period to develop a claims probability distribution (CPD). This CPD is then used to estimate member cost-share vs. issuer cost-share for each benefit category and benefit plan. The Paid-to-Allowed Ratio is derived by applying expected distribution of business by benefit plan to the cost-sharing estimates. The expected Paid-to-Allowed Ratio for the 2016 single risk pool is 75.7%.

Some differences exist between the cost-sharing as calculated above and the Metal AVs that are described in Section 18 of this document. These dissimilarities exist as a result of the following differences in methodology:

- The CPD used to calculate member and insurer cost-share is different from the underlying claims distribution in the continuance tables of the AV Calculator. The continuance tables are based on the default standard population developed by HHS using claims and enrollment from a national commercial database. The CPD is based on claims and enrollment data from CHLIC's national group book of business. This experience-based CPD has a larger volume of its distribution at the tail, which represents higher average costs.
- The underlying cost assumptions for copays are different in the AV Calculator as compared to CHLIC's experience. Since most of the proposed plans represented in this filing have copay based cost-sharing for Primary Care Physician and Specialist office visits and some plans have copays on additional services, this causes a difference between the Paid-to-Allowed ratio and the Metal AV for most plans.
- The AV Tool only accounts for in-network benefits, whereas the paid-to-allowed ratio incorporates the impact of out-of-network benefits as well.
- Cost-sharing for other benefits, such as separate copays for urgent care, is not captured in the AV Tool, whereas CHLIC takes these benefits into account when deriving the paid-to-allowed ratio.

Note that the Paid-to-Allowed ratio as shown above is CHLIC's best-estimate of the total expected paid claims that are the liability of CHLIC, divided by the total expected allowed claims for the Projection Period, for the population anticipated to be covered in the Projection Period. The URRT does not accurately demonstrate the process used by CHLIC in the development of rates. As a result, in order to accurately reflect CHLIC's Projected Allowed Experience Claims, Single Risk Pool Gross Average Premium, Risk

Adjustment, Reinsurance, and Expense assumptions in the URRT, an adjustment factor was applied to the Paid-to-Allowed ratio in Worksheet 1, cell V33 of the URRT.

9. RISK ADJUSTMENT & REINSURANCE

a. Experience Period Risk Adjustment and Reinsurance Adjustments (PMPM)

Reinsurance recoveries for 2014 were estimated by applying the reinsurance parameters as outlined in the 2014 Notice of Benefits & Payment Parameters to 2014 CHLIC member-level experience in California. Projected reinsurance recoveries on IBNR claims was also estimated based on actual 2014 experience.

The expected member-level risk transfer amounts for 2014 were calculated based on 2014 CHLIC experience in California and proprietary data obtained from Wakely Consulting Group. CHLIC-specific risk scores and other transfer formula components were calculated internally in accordance with the Notice of Benefit and Payment Parameters for 2014 final rule (CMS-9964-F). Internal data was then combined with data obtained from Wakely Consulting Group, which estimated the various market-level components of the risk transfer formula based on actual data received from carriers in California, to arrive at a final estimate for 2014 risk transfer.

b. Projected Risk Adjustments (PMPM)

A 2016 risk transfer receivable of \$82.72 PMPM on an allowed basis, was assumed in rate development. To model the 2016 risk transfer, 2014 member-level risk transfer amounts were estimated based on 2014 CHLIC experience and proprietary data obtained from Wakely Consulting Group, which estimated the various market-level components of the risk transfer formula based on actual data received from carriers in a given market. The projection for the 2016 risk transfer further adjusts these 2014 risk transfer amounts for:

- a) The expected change in market-average morbidity between 2014 and 2016, as outlined in Section 5 of this document
- b) The expected change in the morbidity of CHLIC's single risk pool between 2014 and 2016, as outlined in Section 5 of this document
- c) The recalibrated 2016 risk adjustment model, as outlined in the 2016 Notice of Benefits & Payment Parameters
- d) The average paid-to-allowed ratio as outlined in Section 8 of this document, to provide final estimates on an allowed basis for development of the Market Adjusted Index Rate

The projected average risk adjustment transfer, net of risk adjustment user fees of \$0.15 PMPM resulted in a final risk adjustment PMPM of \$82.57. This amount was applied to the Index Rate in the development of the Market Average Index Rate and does not match cell V35 on Worksheet 1 of the URRT, which is on a paid basis.

CHLIC does not anticipate any fees or receipts from the risk corridor program in 2016 and has not included any pricing adjustments for risk corridor payments in rate development.

c. Projected ACA Reinsurance Recoveries Net of Reinsurance Premium

Reinsurance payments have been estimated using one full year of nationwide individual experience claims data in addition to a representative sample of nationwide group claims data. This data consisted of member-level claims data from full year 2014 trended to a 2016 basis and adjusted for the anticipated morbidity level as outlined in Section 6 in this memorandum. We believe that this adjusted claims data is representative of the annual distributions of claims per member we expect in 2016. Based on our claims data and the federal reinsurance parameters, we estimate that the reinsurance will cover 7.7% of allowed medical and pharmacy claims.

To estimate reinsurance contributions, an annual contribution of \$27 per covered life is assumed. The net effect on plan costs (contributions minus payments) is expected to be \$39.32 PMPM. This amount was applied to the Index Rate in the development of the Market Average Index Rate and does not match cell V37 on Worksheet 1 of the URRT, which is on a paid basis.

10. NON-BENEFIT EXPENSES, PROFIT, & RISK

The following table illustrates anticipated breakdown of the retention components. It should be noted that the administrative expenses below reflect that CHLIC is pricing to scalable membership. Hence, these expenses reflect the amount that will be incurred if CHLIC attains scale, which is not anticipated for the rating period. In the current rating period, CHLIC has applied non-benefit expenses,

profit & risk load as a constant percentage of premium to all plans. This equates to 21.41% and is derived based on the projected expenses as a portion of projected average statewide premium with a target loss ratio of 78%. Actual expenses on both a PMPM and percentage of premium basis will vary based on the actual size and distribution of membership by age and plan.

Retention Component	% of Premium
Administrative Expense	13.51%
Profit Margin	2.50%
Taxes & Fees (including ACA expenses)	5.39%
Total Retention	21.41%

a. Administrative expense load

CHLIC's non-medical expenses are split out as follows:

- Acquisition administrative expense this includes, but is not limited to, incentive compensation & salaries for brokers and agents, commissions†, marketing costs (working media & non-working media), and vendor fees.
- Recurring administrative expense this includes, but is not limited to, costs relating to customer analytics, service operations, account management, and corporate overhead.

The administrative expense load is based on internal estimates from CHLIC's Financial Analysis team and is deemed appropriate for the plans proposed in this filing. To determine this load, membership for CHLIC's benefit plans is projected as outlined in Section 20. This membership is then applied to known budgeted amounts for administrative expenses to determine an appropriate administrative load across all plans as a percentage of premium allocation. The administrative expense load was applied uniformly as a percentage of premium and do not vary by plan or product.

† Commissions vary based on distribution channel and plan. Since premium rates for plans must be the same across all channels, CHLIC has averaged its commissions based on expected membership distribution by acquisition type.

b. Profit & Risk Margin

CHLIC has targeted a 2.5% profit margin that is built into its premium rates. This target is based on CHLIC attaining scalable membership, which is not expected for the rating period. In the event that actual membership size and distribution differs from expectations, the actual profit margin may vary. There is no additional risk margin load.

c. Taxes & Fees

Please note that this section excludes contributions to Federal transitional reinsurance program and risk adjustment user fees, since these fees are included in the projected risk transfer and reinsurance recoveries, per Section 4.4.8 of the 2016 Unified Rate Review Instructions.

- Premium Tax is applied as 2.35% of premium
- PCORI Fee is applied as \$2.08 PMPY or 0.04% of premium
- Health Insurer's Fee is applied as 3.0% of premium

11. PROJECTED LOSS RATIO

The projected 2016 PPACA MLR, without adjustment for credibility, for CHLIC's individual products is 84.60%.

A demonstration of the projected MLR calculation is illustrated below:

	PPACA 2016 MLR						
1	Member Months		387,029				
2	Incurred Claims	\$	158,158,344				
3	Claims Adjustment*	\$	(35,710,054)				
4	Numerator $(2+3)$	\$	122,448,290				

5	Earned Premium	\$ 156,164,125
6	Premium Adjustment**	\$ (11,418,297)
7	Denominator $(5+6)$	\$ 144,745,827
8	Credibility Factor	1.5%
9	Avg Deductible Factor	124.3%
10	Credibility Adjustment (8 x 9)	1.8%
11	PPACA MLR w/o Credibility (4 ÷ 7)	84.60%
12	PPACA MLR w/ Credibility (10 + 11)	86.44%

^{*} Quality Improvement Activities, Traditional Reinsurance Receipts, Risk Adjustment & Risk Corridor Receipts

Figures in the PPACA MLR exhibit have been calculated as follows:

- Member Months projections for member months are developed internally as best estimates generated by applying current market share percentages and additional adjustments to take into account the addressable market opportunity. This figure ties to Cell X47 in Worksheet 1 URRT.
- Incurred Claims projections for incurred claims are consistent with Cell X34 in Worksheet 1 of the URRT.
- Claims Adjustment defined as specified by HHS Notice of Benefit & Payment Parameters for 2016 (Final Rule)
- Earned Premium projections for earned premium are developed by applying the projected average rate PMPM from cell V43 in Worksheet 1 of the URRT to the expected member months projections specified earlier.
- Premium Adjustment defined as specified by HHS Notice of Benefit & Payment Parameters for 2016 (Final Rule)
- Credibility Adjustment The credibility adjustment is calculated using the methodology specified in 45 CFR 158.232. This adjustment incorporates the impact of the base credibility factor and the average deductible factor.

12. SINGLE RISK POOL

CHLIC has included all covered lives for every non-grandfathered product/plan combination in the individual market in California in the single risk pool, as specified in 45 CFR 156.80(d). Please note that CHLIC does not have any transitional policies.

13. INDEX RATE

The Index Rate of the Experience Period for this filing is \$864.00. The Index Rate of the Experience Period on Worksheet 1, Section 1 of the URRT represents the total combined 2014 allowed claims experience PMPM attributable to Essential Health Benefits in the single risk pool. It is consistent with the Experience Period Allowed Claims PMPM, as shown in Worksheet 1, Section 2 of the URRT, since no benefits in addition to EHBs were offered in the experience period.

The Index Rate for the Projection Period for this filing is \$540.76 and was developed in accordance with 45 CFR Part 156.80(d). The Index Rate for the Projection Period identified in Worksheet 1, Section 3, of the URRT was generated using the same methodology as used in determining the Single Risk Pool Gross Premium Average Rate in Cell V43 of Worksheet 1 in the URRT. Hence, the Projected Index Rate is a representation of the Expected Allowed Claims for 2016 attributable to Essential Health Benefits, and incorporates the impact of trend, benefit, morbidity, and demographic adjustments as outlined in Sections 5 and 6 of this document. Refer to Section 7 of this document for additional information regarding the credibility attributed to single risk pool experience in the development of the Index Rate for the Projection Period. There are no benefits in addition to EHBs that are being covered under the proposed plans in 2016. No consideration is granted to the expected impact of specific eligibility categories for catastrophic plans because these plans are not being proposed in this filing.

14. MARKET ADJUSTED INDEX RATE

The Market Adjusted Index Rate for this filing is \$418.87. The Market Adjusted Index rate is calculated as the Index Rate adjusted for all allowable market-wide modifiers defined in the market rating rules, 45 CFR Part 156.80 (d)(1). The following market-wide adjustments have been made to the Index Rate, as allowed under these rules:

• Federal Reinsurance Recoveries - The Index Rate has been adjusted for the net recovery from the reinsurance program. This adjustment equates to an impact of \$39.32 PMPM.

^{**} Premium/Payroll/Federal Income Tax and ACA Fee Adjustments

• Risk Transfer - The Index Rate has been adjusted for the net transfer from the risk adjustment program. This adjustment equates to an impact of \$82.57 PMPM on the Index Rate.

Please refer to Risk Adjustment and Reinsurance Section (section 9) for detailed explanation of how the Reinsurance adjustments and Risk adjustment were developed.

The Market Adjusted Index Rate reflects the average demographic characteristics of the single risk pool and is not calibrated.

15. PLAN ADJUSTED INDEX RATE

a. Plan Adjusted Index Rate for the Projection Period

Only the following allowable modifiers (as specified in 45 CFR 156.80(d)) have been used to adjust the Market Adjusted Index Rate to arrive at the Plan Adjusted Index Rates:

- Plan-specific actuarial value and cost sharing adjustments
- Administrative costs, excluding the Risk Adjustment User Fee and Transitional Reinsurance Program fee

The adjustment Impact of specific eligibility categories for the catastrophic plan is not applicable since CHLIC does not plan to offer catastrophic plans in 2016.

Note that the AV and cost-sharing adjustment encompasses expected cost-sharing differences and utilization differences due to differences in cost-sharing.

The expected cost-sharing ratio for each benefit plan is calculated by using group experience over the experience period (trended to the proposed filing period) to develop a claims probability distribution (CPD). This CPD is then used to estimate member cost-share vs. issuer cost-share for each benefit category and benefit plan.

In addition to cost sharing differences, this adjustment also includes utilization differences due to differences in cost sharing. In evaluating adjustment for utilization changes, CHLIC has relied on internal studies that used regression analysis at the major service category level, to develop a relationship between historical utilization and corresponding expected cost-sharing. This adjustment is consistent with the description on page 59 of the 2016 Unified Rate Review Instructions. There are no explicit and/or additional adjustments used in our rate development process that reflect expected differences in utilization due to health status.

b. Plan Adjusted Index Rate for the Experience Period

The Plan Adjusted Index Rate for the Experience Period has been included in row 58 on Worksheet 2 of the URRT. This represents the expected non-calibrated statewide average premium based on expected membership at time of 2014 Pricing. The Plan Adjusted Index Rate for the Experience Period differs from the average premium rate in Section 1 of Worksheet 1 due to the differences between projected and actual 2014 membership by age and geography.

16. CALIBRATION

CHLIC calibrates the Plan Adjusted Index Rates to apply the allowable rating factors (age and geography) in order to calculate Consumer Adjusted Premium Rates. The calibration for each allowable rating factor is described below.

a. Age Curve Calibration

The weighted average age factor for the projected membership was calculated using the Default Federal Standard Age Curve. The average age associated with this projected membership (rounded to the nearest whole number) is 42. This single risk pool average age was determined using a blend of the current 2015 age distribution in the single risk pool and 2015 market-wide enrollment data released by Covered California. The Plan Adjusted Index Rate was divided by the weighted average age factor mentioned above, to arrive at the calibrated Plan Adjusted Index Rate for a 21 year old. A demonstration of how the Plan Adjusted Index Rate and the age curve were used to generate the calibrated Plan Adjusted Index Rate for each plan is provided below.

b. Geographic Factors

Rate variations among geographical areas vary only by the geographic rating regions defined by the federal government. Area factors reflect only differences in the cost of the delivery of medical services among rating areas for a standard population and fixed market basket of covered services. The following table shows the geographic factors for each defined area in California:

Area	4	5	6	7	8	15	16	17	18	19
Area Factor	1.20	1.12	1.15	1.11	1.26	0.94	1.00	0.94	1.04	1.16
Membership	4.5%	3.4%	6.6%	11.9%	3.4%	6.7%	31.3%	6.6%	14.0%	11.7%

An average geographic factor is developed based on the projected distribution of membership across all areas. Then the calibrated Plan Adjusted Index Rate is calculated as Plan Adjusted Index Rate divided by this weighted average geographic factor.

A demonstration of calibration for the Plan Adjusted Index Rate is provided in the table below.

Plan Name	HIOS Plan ID	PAIR	Geographic Calibration	Demographic Calibration	Calibrated PAIR
Cigna California Bronze	40025CA0020001	\$329.75	0.94	0.75	\$232.80
Cigna Health Flex 6400	40025CA0020003	\$327.08	0.94	0.75	\$230.91
Cigna Health Savings 6100	40025CA0020002	\$321.52	0.94	0.75	\$226.99
Cigna California Silver	40025CA0020004	\$412.42	0.94	0.75	\$291.17
Cigna Health Flex 3000	40025CA0020006	\$398.26	0.94	0.75	\$281.17
Cigna Health Savings 2700	40025CA0020005	\$376.84	0.94	0.75	\$266.04
Cigna California Gold	40025CA0020008	\$502.11	0.94	0.75	\$354.49
Cigna California Platinum	40025CA0020011	\$586.34	0.94	0.75	\$413.95

^{*} The Plan Adjusted Index Rate represents average premium for the projected single risk pool at the unrounded average age, weighted using the best-estimate Default Federal Standard Age Curve factors. Linear interpolation between integer Default Federal Standard Age Curve factors was used in the development of the Demographic Calibration factor.

17. CONSUMER ADJUSTED PREMIUM RATE

Consumer Adjusted Premium Rate is developed by applying the following allowable adjustments to the calibrated Plan Adjusted Index Rate.

- Individual and family tier applied by summing the premiums for each individual family member, provided at most three child dependents under age 21 are taken into account
- Rating area factor applied by multiplying the area factors to the calibrated Plan Adjusted Index Rate
- Age factor applied by multiplying the age factor to the calibrated Plan Adjusted Index Rate

18. AV METAL VALUES

The AV Metal Values shown in Worksheet 2 of the URRT for the following plans were based entirely on the AV Calculator. Therefore, CHLIC has not submitted a Unique Plan Design justification for these plans.

HIOS Plan ID
40025CA0020002
40025CA0020005

The AV Metal Values shown in Worksheet 2 of the URRT for the plans listed below were based on the AV Calculator, with the exception of the following unique benefits for select plan designs:

- Cost-Sharing for Pharmacy Retail vs. Home-Delivery Service
- Outpatient Mental Health and Substance Abuse Services

These benefits were outside the scope of the AV Calculator and hence an alternate methodology was deemed necessary as per 45 CFR 156.135(b). The impacted plans, alternate methodologies, and the reason for their use is explained in the accompanying actuarial certification titled "Unique Plan Design Supporting Documentation & Justification".

HIOS Plan ID				
40025CA0020003	40025CA0020006			

19. AV PRICING VALUES

A demonstration of the development of the Plan Adjusted Index Rate from the Market Adjusted Index Rate is provided table below.

HIOS Plan ID	MAIR	Actuarial Value and CS	Network, Delivery, and UM	Benefits in Addition to EHB	Catastrophic Plans	Distribution and Admin Costs	PAIR
40025CA0020001	\$418.87	0.62	1.00	1.00	1.00	1.27	\$329.75
40025CA0020003	\$418.87	0.61	1.00	1.00	1.00	1.27	\$327.08
40025CA0020002	\$418.87	0.60	1.00	1.00	1.00	1.27	\$321.52
40025CA0020004	\$418.87	0.77	1.00	1.00	1.00	1.27	\$412.42
40025CA0020006	\$418.87	0.75	1.00	1.00	1.00	1.27	\$398.26
40025CA0020005	\$418.87	0.71	1.00	1.00	1.00	1.27	\$376.84
40025CA0020008	\$418.87	0.94	1.00	1.00	1.00	1.27	\$502.11
40025CA0020011	\$418.87	1.10	1.00	1.00	1.00	1.27	\$586.34

CHLIC is not incorporating any impact due to the different morbidity or health status of individuals who select certain plans in the derivation of the Pricing AV. See Section 15 in this document for an explanation of the factors used in the development of the Pricing AV.

20. MEMBERSHIP PROJECTIONS

The membership projections for CHLIC's benefit plans are developed internally as best estimates. They were derived from CHLIC 2015 open enrollment experience and assumed channel growth in California. Active membership splits were used to develop projections by metal tiers, together with growth assumptions by channel. The projected distribution of member months represents our expectation of the industry average distribution of enrollment by age for the Individual Market for 2016.

21. TERMINATED PRODUCTS

Table 1 below provides a summary of the actual plan mapping for 2014 through to 2016. For purposes of completing Sections III and IV on Worksheet 2 of the URRT, plans having the highest membership in the Experience Period were mapped to plans offered in the Projection Period. Table 2 below provides a summary of this mapping. Further, "terminated" plans that were offered in the Experience Period but were not mapped to plans offered in the Projection Period for the purposes of completing these sections in the URRT are shown in Table 3.

State 2014 Membership **2014 HIOS ID 2015 HIOS ID 2016 HIOS ID** CA 4,095 40025CA0020001 40025CA0020001 40025CA0020001 CA 9,462 40025CA0020002 40025CA0020002 40025CA0020002 CA 3,745 40025CA0020003 40025CA0020003 40025CA0020003 CA 23,717 40025CA0020004 40025CA0020004 40025CA0020004 6,140 40025CA0020005 40025CA0020005 40025CA0020005 CA CA 7,138 40025CA0020006 40025CA0020006 40025CA0020006

CA	40025CA0020009

22. PLAN TYPE

The plan types as inputted in Worksheet 2, Section 1 of the URRT accurately describe the plans in this filing.

23. WARNING ALERTS

Row 67 & 72 – Per Worksheet 2 of the URRT, the Total Incurred claims payable with issuer funds equals allowed claims less all allowed claims which are not the issuer's obligation, including member cost-sharing, reinsurance and risk adjustment receivables or payables, and cost-sharing paid by HHS on behalf of low-income members. However, page 13 of the Universal Rate Review Instructions indicates that the Incurred Claims in Experience Period, as shown on Worksheet 1 of the URRT, is allowed claims less member cost-sharing and cost-sharing paid by HHS on behalf of low-income members. Therefore, cell F15 on Worksheet 1 of the URRT does not exclude expected receipts or payments to the reinsurance or reinsurance programs for 2014, while row 71 on Worksheet 2 does exclude these payments.

24. EFFECTIVE RATE REVIEW INFORMATION

a. Financial Information

Cigna Health & Life Insurance Company (CHLIC)							
(\$ Millions)	2011	2012	2013	2014	2015 (Proj)		
Post-Tax Stat Net Income	123	301	489	1,047	1,187		
Stat Capital & Surplus	543	1,018	1,714	2,800	3,123		
Asset Valuation Reserve	7	22	45	97	100		
Authorized Control Level RBC	44	172	355	480	591		
Dividend History	0	0	0	0	0		
Return on Equity	41%	38%	35%	46%	39%		

CHLIC is in strong financial condition. The YE 2014 ACL RBC ratio was 603%. In prior years when the company was significantly smaller, the RBC ratio was much higher. For the next few years, CHLIC is expected to maintain an ACL RBC ratio around 540%. The proposed plans and rates will have an immaterial impact on the company's financial condition, even with significant membership growth.

b. Rating Information

To see the proposed rate manual by age, area and smoking status please reference the accompanying QHP Rate Data Template. For additional rating rules used in deriving the premium please refer to the accompanying Business Rules Template.

A description of the benefits for all plans proposed in this filing is shown in the accompanying Plans Benefits Template.

Please note that CHLIC shall satisfy the requirement to offer coverage for all essential health benefits off-exchange by providing all applicants a medical policy that covers the pediatric dental benefit.

c. Other

CHLIC's anticipated loss ratio (without ACA adjustments) for the proposed plans in this filing is 78%.

25. RELIANCE

In preparing the Part 1 Unified Rate Review Template submission, I have relied on data and analysis provided by Brian Abrahamsen, Actuarial Senior Analyst. In addition, I have relied on external sources in order to develop the underlying assumptions for the development of the proposed premium rates.

26. ACTUARIAL CERTIFICATION

- I, Minhe Yu, am a Fellow of the Society of Actuaries and a Member of the American Academy of Actuaries. I certify, to the best of my knowledge and judgment, that:
 - a) The rates proposed in the above noted rate filing are
 - In compliance with all applicable State & Federal Statutes & Regulations (45 CFR 156.80(d)(1))
 - Developed in compliance with applicable Actuarial Standards of Practice, including but not limited to the following:
 - o ASOP #5, Incurred Health & Disability Claims
 - o ASOP #8, Regulatory Filings for Health Plan Entities
 - o ASOP #12, Risk Classification
 - o ASOP #23, Data Quality
 - ASOP #25, Credibility Procedures Applicable to Accident & Health, Group Term Life, and Property & Casualty Coverages
 - o ASOP #26, Compliance with Statutory & Regulatory Requirements for the Actuarial Certification of Small Employer Health Benefit Plans
 - o ASOP #41, Actuarial Communications
 - Reasonable in relation to the benefits provided and the population anticipated to be covered
 - b) The Projected Index Rate presented in this filing is:
 - a. In compliance with all applicable state and Federal statutes and regulations in 45 CFR 156.80(d)(1)
 - b. Developed in compliance with the applicable Actuarial Standards of Practice
 - c. Reasonable in relation to the benefits provided and the population anticipated to be covered
 - d. Neither excessive not deficient
 - c) Plan level rates were generated using only the index rate and allowable modifiers as described in 45 CFR 156.80(d)(1) and 45 CFR 156.80(d)(2)
 - d) The geographic rating factors reflect only differences in the costs of delivery, including unit cost and provider practice pattern differences, and do not include differences for population morbidity by geographic area.
 - e) The percent of total premium that represents Essential Health Benefits included in Worksheet 2, Section IV, of the Part 1 URRT was calculated in accordance with applicable Actuarial Standards of Practice
 - f) The AV Calculator was used to determine the AV Metal Values shown in Worksheet 2 of the Part I URRT for all plans, save the exceptions shown in Section 18, which are further explained in the accompanying actuarial certification "Unique Plan Design Supporting Documentation & Justification".

The URRT does not demonstrate the process used to develop the rates presented in this filing. Rather, it represents information required by Federal regulation to be provided in support of the review of rate increases, for certification of Qualified Health Plans for Federally-facilitated Marketplaces, and for certification that the Index Rate is developed in accordance with Federal regulation and used consistently and only adjusted by the allowable modifiers.

1. GENERAL INFORMATION

Insurance Company Name	Cigna Health & Life Insurance Company
NAIC Company Code	67369
HIOS Issuer ID	40025
State	California
Market Type	Individual
Proposed Effective Date	01/01/2016
Primary Contact Person and Title	Minhe Yu, FSA, MAAA, Actuarial Manager
Primary Contact Telephone Number	(860) 226-0342
Primary Contact Email	Minhe.Yu@Cigna.com

Scope and Purpose of Filing: Cigna Health & Life Insurance Company (CHLIC) is filing rates for comprehensive major medical products 40025CA002 for individuals & families, to be effective January 1, 2016. The plans represented in this filing will be Guaranteed Issue & Guaranteed Renewable and are to be marketed through brokers, general agents, and directly to consumers as described in the policy form. These plans are attached to an existing product that has been submitted under policy form filing CACHIND012016. This policy form is not subject to medical underwriting. Please note that the content of this filing is intended to be reviewed by an actuary.

2. PROPOSED RATE INCREASE

The proposed weighted average annual rate change by product, without the impact of aging, is provided below. The rate change reflects the weighted average rate change with all terminating plans being mapped into a new plan. Table 1 in Section 21 provides the detailed mapping of terminating 2015 plans to new 2016 plans that was used for the development of the proposed rate change.

2016 HIOS Product ID	40025CA002
Proposed Rate Increase	6.63%

The following factors are the main drivers of the proposed rate change:

- Medical Inflation and unit cost changes of medical services year over year: The underlying claim costs are expected to
 increase from 2015 to 2016, which is reflective of anticipated changes in the prices of medical services, the frequency with
 which consumers utilize services, as well as any changes in network contracts or provider payment mechanisms.
- The non-grandfathered individual marketplace is evolving in light of the material segment changes initiated by the Patient Protection and Affordable Care Act (PPACA), such as the introduction of the guaranteed issue requirement, modified community rating, subsidies, the risk adjustment program, and many other provisions. After consideration for expected risk adjustment transfers and reinsurance recoveries, the single risk pool experience for CHLIC in California was more adverse than assumed in the current rates. As a result, CHLIC's best estimate of the average market-wide morbidity of the covered population has increased compared to 2015.
- Transitional Reinsurance Program Changes: The amount of funding available to offset adverse experience is decreasing from \$6B in 2015 to \$4B in 2016. Consequently, the reduction in claim costs due to the program has decreased, driving an increase in premiums compared to 2015.
- Plan design changes and benefit modifications: Changes have been made to certain plans that are resulting in a decrease in expected cost share and therefore a decrease to premium. All plan designs conform to actuarial value and essential health benefit requirements.

The requested rate change is not the same across all plans. The following factors drive different rate changes by plan:

- Plan design changes and benefit modifications
- Trend leveraging due to member cost sharing provisions
- CHLIC has made refinements to the manual rating methodology and refreshed the claim probability distribution (CPD) used in the development of the cost sharing for its plans based on its most recent group experience, which leads to different cost share and expected claim cost changes among plans

 CHLIC has updated the data and methodology used to project changes to customer utilization patterns as a result of changes in cost sharing

3. EXPERIENCE PERIOD PREMIUM & CLAIMS

a. Paid Through Date: December 31, 2014

Premiums in Experience Period: Premiums in experience period represent actual 2014 premiums received through 2/28/2015.

c. Allowed & Incurred Claims:

All claims are processed through CHLIC's claim system. Allowed claims shown below represent the sum of payments made under the policy to healthcare providers.

IBNR claims are calculated using completion factors, which represent the known paid claims as a percent of the estimated total accrual as of a particular lag period after a service month. Completion factors for a given reporting period are developed based on historical run-out patterns, adjusted for actuarial judgment regarding deviance from the average (within a reasonable range based on historical deviance). The methodology used to calculate IBNR does not differ for allowed claims versus incurred claims.

4. BENEFIT CATEGORIES

To determine benefit categories, CHLIC uses a combination of Procedure Code and Place of Service to categorize each claim under an appropriate Major Service Category. These categories are defined as follows:

- <u>Inpatient Hospital</u>: Includes non-capitated facility services for medical, surgical, maternity, mental health and substance abuse, skilled nursing, and other services provided in an inpatient facility setting and billed by the facility.
- <u>Outpatient Hospital</u>: Includes non-capitated facility services for surgery, emergency room, lab, radiology, therapy, observation and other services provided in an outpatient facility setting and billed by the facility.
- <u>Professional</u>: Includes non-capitated primary care, specialist, therapy, the professional component of laboratory and radiology, & other professional services, except hospital based professionals whose payments are included in facility fees.
- Other Medical: Includes non-capitated ambulance, home health care, DME, prosthetics, supplies, vision exams, dental services and other services.
- Prescription Drug: Includes drugs dispensed by a pharmacy, net of rebates received from drug manufacturers.

5. PROJECTION FACTORS

The Projection Factors descried below are included in Section II, Worksheet 1 of the URRT.

• <u>Changes in the Morbidity of the Population Insured:</u> Experience was adjusted to account for expected morbidity differences between the underlying experience population and the projected 2016 population. The morbidity adjustment factor accounts

for morbidity drivers specific to CHLIC's single risk pool, including the membership distribution by metal tier. The morbidity adjustment factor also accounts for expected market-wide morbidity changes due to a stronger individual mandate, increased awareness of Individual health insurance products, and pent-up demand which is not expected to continue in 2016.

- <u>Changes in Benefits</u>: The adjustment for changes in benefits was derived by comparing the average manual allowed claim cost for the 2016 product portfolio, weighted by projected 2016 membership by plan, to the average manual allowed claim cost for the 2014 product portfolio, weighted by 2014 CHLIC experience membership by plan. This adjustment captures anticipated changes in average utilization of services due to differences between the average member cost-sharing during the experience period and the expected average member cost-sharing in the projection period.
- <u>Changes in Demographics:</u> An adjustment was made to account for the change in distribution by age and gender between the 2014 underlying experience and the expected 2016 membership. The adjustment factor was developed as the ratio of the membership-weighted average age factor using CHLIC's best-estimate age slope and 2016 projected membership, and a similar factor computed using the 2014 actual membership. An area adjustment was also made to reflect differences between the distribution of membership across rating areas in our experience population and our 2016 projected population.
- Trend Factors: The source data to determine the trend is national group experience adjusted for market-specific differences. Adjustments were made to account for differences in utilization across major service categories and differences in the formulary between group and individual. CHLIC's 2014 single risk pool experience is trended forward two years to 2016. The trend for group is deemed appropriate for use in development of individual rates because the networks constructed for group and individual are similar, and any differences in network are captured by a separate network savings decrement.

6. CREDIBILITY MANUAL RATE DEVELOPMENT

a. Source & Appropriateness of Experience Data used in Developing the Manual Rate

The source data used to generate the Manual Rate is trended national group experience adjusted for state- and market-specific differences. The experience for the national group book of business is deemed appropriate for development of the Manual Rate because the baseline experience was not subject to individual medical underwriting and the benefits for the group experience are similar to the benefits required to be ACA compliant. The adjustments to the baseline data are addressed below.

b. Adjustments made to the Data

The following adjustments were made during development of the Manual Rate to account for differences between the source data and characteristics of the anticipated population in the Individual Market for the proposed period:

• Morbidity Load – A load was added to the manual rate to account for the difference in morbidity risk of the population underlying the manual rate and the anticipated Individual population in 2016.

The morbidity load comprehends the following components:

- Overall health status in the Individual marketplace Customers seeking coverage through the Individual market tend to have a different average health status than those who receive coverage through their employer. The average morbidity in the Individual market is driven by external factors such as the strength of the individual mandate, overall awareness of Individual health insurance products, and the presence or absence of transitional policies. All such factors are included in the morbidity load.
- Membership distribution by metal tier—In the Individual market, individuals tend to select plans that best meet their health needs. Riskier individuals tend to choose plans with lower member cost-share. The expected membership distribution by metal tier therefore impacts the overall expected morbidity in the single risk pool. This adjustment is applied to the index rate only and no plan-specific adjustments are made to account for anticipated differences in health status of enrollees across plans.
- Demographic Adjustment The experience underlying the Manual Rate development does not conform to the 3:1 age slope as prescribed by the ACA. Hence, an adjustment was made to reflect the impact of compression of age slopes as well as to account for the different distribution by age in the 2016 individual market than the distribution by age reflected in the data underlying the Manual Rate.

- Impact of EHB Most EHBs are already represented in the base experience underlying the derivation of the Manual Rate. However, certain EHBs are not represented in the base experience and the impact of covering these benefits is subsequently added to the Manual Rate, resulting in a load.
- Network Savings CHLIC's underlying network for its proposed plans in this filing is different from the network underlying the experience used in deriving the Manual Rate.
- Pharmacy Formulary Savings Pharmacy claim cost experience used in the development of the Manual Rate is based on national group experience. This group experience is representative of a broader formulary than the formulary associated with CHLIC's individual product. The narrower formulary results in a savings of a pharmacy claim costs compared to the Manual Rate.
- Hepatitis C and Specialty —

 Also, generic specialty drugs have been moved from the Specialty Drug tier (Tier 4) to the Generic tier (Tier 1) of the formulary. Together these changes resulted in a increase to pharmacy claim costs.
- c. Inclusion of Capitation Payments

There are no services provided under a capitation arrangement for plans included in this filing.

7. CREDIBILITY OF EXPERIENCE

Limited fluctuation credibility was used to determine the credibility assigned to the 2014 single risk pool experience. 2014 exposure of 100,000 member months was assigned 100% credibility. Therefore, the credibility assigned to 2014 single risk pool experience was 100%

8. PAID TO ALLOWED RATIO

The expected cost-sharing ratio for each benefit plan is calculated by using group experience trended to the proposed filing period to develop a claims probability distribution (CPD). This CPD is then used to estimate member cost-share vs. issuer cost-share for each benefit category and benefit plan. The Paid-to-Allowed Ratio is derived by applying expected distribution of business by benefit plan to the cost-sharing estimates. The expected Paid-to-Allowed Ratio for the 2016 single risk pool is

Some differences exist between the cost-sharing as calculated above and the Metal AVs that are described in Section 18 of this document. These dissimilarities exist as a result of the following differences in methodology:

- The CPD used to calculate member and insurer cost-share is different from the underlying claims distribution in the continuance tables of the AV Calculator. The continuance tables are based on the default standard population developed by HHS using claims and enrollment from a national commercial database. The CPD is based on claims and enrollment data from CHLIC's national group book of business. This experience-based CPD has a larger volume of its distribution at the tail, which represents higher average costs.
- The underlying cost assumptions for copays are different in the AV Calculator as compared to CHLIC's experience. Since
 most of the proposed plans represented in this filing have copay based cost-sharing for Primary Care Physician and Specialist
 office visits and some plans have copays on additional services, this causes a difference between the Paid-to-Allowed ratio
 and the Metal AV for most plans.
- The AV Tool only accounts for in-network benefits, whereas the paid-to-allowed ratio incorporates the impact of out-of-network benefits as well.
- Cost-sharing for other benefits, such as separate copays for urgent care, is not captured in the AV Tool, whereas CHLIC takes these benefits into account when deriving the paid-to-allowed ratio.

Note that the Paid-to-Allowed ratio as shown above is CHLIC's best-estimate of the total expected paid claims that are the liability of CHLIC, divided by the total expected allowed claims for the Projection Period, for the population anticipated to be covered in the Projection Period. The URRT does not accurately demonstrate the process used by CHLIC in the development of rates. As a result, in order to accurately reflect CHLIC's Projected Allowed Experience Claims, Single Risk Pool Gross Average Premium, Risk

Adjustment, Reinsurance, and Expense assumptions in the URRT, an adjustment factor was applied to the Paid-to-Allowed ratio in Worksheet 1, cell V33 of the URRT.

9. RISK ADJUSTMENT & REINSURANCE

a. Experience Period Risk Adjustment and Reinsurance Adjustments (PMPM)

Reinsurance recoveries for 2014 were estimated by applying the reinsurance parameters as outlined in the 2014 Notice of Benefits & Payment Parameters to 2014 CHLIC member-level experience in California. Projected reinsurance recoveries on IBNR claims was also estimated based on actual 2014 experience.

also estimated based on actual 2014 experience.
The expected member-level risk transfer amounts for 2014 were calculated based on 2014 CHLIC experience in California
. CHLIC-specific risk scores and other transfer formula components were
calculated internally in accordance with the Notice of Benefit and Payment Parameters for 2014 final rule (CMS-9964-F).
b. Projected Risk Adjustments (PMPM)
A 2016 risk transfer of PMPM on an allowed basis, was assumed in rate development. To model the 2016 risk
transfer, 2014 member-level risk transfer amounts were estimated based on 2014 CHLIC experience and
The projection for the 2016 risk transfer further adjusts these 2014 risk transfer amount
for

- a) The expected change in market-average morbidity between 2014 and 2016, as outlined in Section 5 of this document
- b) The expected change in the morbidity of CHLIC's single risk pool between 2014 and 2016, as outlined in Section 5 of this document
- c) The recalibrated 2016 risk adjustment model, as outlined in the 2016 Notice of Benefits & Payment Parameters
- d) The average paid-to-allowed ratio as outlined in Section 8 of this document, to provide final estimates on an allowed basis for development of the Market Adjusted Index Rate

The projected average risk adjustment transfer, net of risk adjustment user fees of \$0.15 PMPM resulted in a final risk adjustment PMPM of This amount was applied to the Index Rate in the development of the Market Average Index Rate and does not match cell V35 on Worksheet 1 of the URRT, which is on a paid basis.

CHLIC does not anticipate any fees or receipts from the risk corridor program in 2016 and has not included any pricing adjustments for risk corridor payments in rate development.

c. Projected ACA Reinsurance Recoveries Net of Reinsurance Premium

Reinsurance payments have been estimated using one full year of nationwide individual experience claims data in addition to a representative sample of nationwide group claims data. This data consisted of member-level claims data from full year 2014 trended to a 2016 basis and adjusted for the anticipated morbidity level as outlined in Section 6 in this memorandum. We believe that this adjusted claims data is representative of the annual distributions of claims per member we expect in 2016. Based on our claims data and the federal reinsurance parameters, we estimate that the reinsurance will cover of allowed medical and pharmacy claims.

To estimate reinsurance contributions, an annual contribution of \$27 per covered life is assumed. The net effect on plan costs (contributions minus payments) is expected to be PMPM. This amount was applied to the Index Rate in the development of the Market Average Index Rate and does not match cell V37 on Worksheet 1 of the URRT, which is on a paid basis.

10. NON-BENEFIT EXPENSES, PROFIT, & RISK

The following table illustrates anticipated breakdown of the retention components.

This equates to and is derived based on the projected expenses as a portion of projected average statewide premium with a target loss ratio of
percentage of premium basis will vary based on the actual size and distribution of membership by age and plan.
a. Administrative expense load
 CHLIC's non-medical expenses are split out as follows: Acquisition administrative expense – this includes, but is not limited to, incentive compensation & salaries for brokers are agents, commissions†, marketing costs (working media & non-working media), and vendor fees. Recurring administrative expense – this includes, but is not limited to, costs relating to customer analytics, service operation account management, and corporate overhead.
The administrative expense load is based on internal estimates from CHLIC's Financial Analysis team and is deemed appropriate for the plans proposed in this filing. To determine this load, membership for CHLIC's benefit plans is projected as outlined in Section 2. This membership is then applied to known budgeted amounts for administrative expenses to determine an appropriate administrative load across all plans as a percentage of premium allocation.
b. Profit & Risk Margin
CHLIC has targeted a profit margin that is built into its premium rates. In the event that actual membership size and distribution differs fro expectations, the actual profit margin may vary. There is no additional risk margin load.
c. Taxes & Fees
Please note that this section excludes contributions to Federal transitional reinsurance program and risk adjustment user fees, since these fees are included in the projected risk transfer and reinsurance recoveries, per Section 4.4.8 of the 2016 Unified Rate Review Instructions. • Premium Tax is applied as 2.35% of premium • PCORI Fee is applied as \$2.08 PMPY or 0.04% of premium • Health Insurer's Fee is applied as 3.0% of premium

11. PROJECTED LOSS RATIO

The projected 2016 PPACA MLR, without adjustment for credibility, for CHLIC's individual products is

- * Quality Improvement Activities, Traditional Reinsurance Receipts, Risk Adjustment & Risk Corridor Receipts
- ** Premium/Payroll/Federal Income Tax and ACA Fee Adjustments

Figures in the PPACA MLR exhibit have been calculated as follows:

- Member Months projections for member months are developed internally as best estimates generated by applying current market share percentages and additional adjustments to take into account the addressable market opportunity. This figure ties to Cell X47 in Worksheet 1 URRT.
- Incurred Claims projections for incurred claims are consistent with Cell X34 in Worksheet 1 of the URRT.
- Claims Adjustment defined as specified by HHS Notice of Benefit & Payment Parameters for 2016 (Final Rule)
- Earned Premium projections for earned premium are developed by applying the projected average rate PMPM from cell V43 in Worksheet 1 of the URRT to the expected member months projections specified earlier.
- Premium Adjustment defined as specified by HHS Notice of Benefit & Payment Parameters for 2016 (Final Rule)
- Credibility Adjustment The credibility adjustment is calculated using the methodology specified in 45 CFR 158.232. This adjustment incorporates the impact of the base credibility factor and the average deductible factor.

12. SINGLE RISK POOL

CHLIC has included all covered lives for every non-grandfathered product/plan combination in the individual market in California in the single risk pool, as specified in 45 CFR 156.80(d). Please note that CHLIC does not have any transitional policies.

13. INDEX RATE

The Index Rate of the Experience Period for this filing is ______. The Index Rate of the Experience Period on Worksheet 1, Section 1 of the URRT represents the total combined 2014 allowed claims experience PMPM attributable to Essential Health Benefits in the single risk pool. It is consistent with the Experience Period Allowed Claims PMPM, as shown in Worksheet 1, Section 2 of the URRT, since no benefits in addition to EHBs were offered in the experience period.

The Index Rate for the Projection Period for this filing is \$540.76 and was developed in accordance with 45 CFR Part 156.80(d). The Index Rate for the Projection Period identified in Worksheet 1, Section 3, of the URRT was generated using the same methodology as used in determining the Single Risk Pool Gross Premium Average Rate in Cell V43 of Worksheet 1 in the URRT. Hence, the Projected Index Rate is a representation of the Expected Allowed Claims for 2016 attributable to Essential Health Benefits, and incorporates the impact of trend, benefit, morbidity, and demographic adjustments as outlined in Sections 5 and 6 of this document. Refer to Section 7 of this document for additional information regarding the credibility attributed to single risk pool experience in the development of the Index Rate for the Projection Period. There are no benefits in addition to EHBs that are being covered under the proposed plans in 2016. No consideration is granted to the expected impact of specific eligibility categories for catastrophic plans because these plans are not being proposed in this filing.

14. MARKET ADJUSTED INDEX RATE

The Market Adjusted Index Rate for this filing is \$418.87. The Market Adjusted Index rate is calculated as the Index Rate adjusted for all allowable market-wide modifiers defined in the market rating rules, 45 CFR Part 156.80 (d)(1). The following market-wide adjustments have been made to the Index Rate, as allowed under these rules:

• Federal Reinsurance Recoveries - The Index Rate has been adjusted for the net recovery from the reinsurance program. This adjustment equates to an impact of \$ PMPM.

• Risk Transfer - The Index Rate has been adjusted for the net transfer from the risk adjustment program. This adjustment equates to an impact of \$ PMPM on the Index Rate.

Please refer to Risk Adjustment and Reinsurance Section (section 9) for detailed explanation of how the Reinsurance adjustments and Risk adjustment were developed.

The Market Adjusted Index Rate reflects the average demographic characteristics of the single risk pool and is not calibrated.

15. PLAN ADJUSTED INDEX RATE

a. Plan Adjusted Index Rate for the Projection Period

Only the following allowable modifiers (as specified in 45 CFR 156.80(d)) have been used to adjust the Market Adjusted Index Rate to arrive at the Plan Adjusted Index Rates:

- Plan-specific actuarial value and cost sharing adjustments
- Administrative costs, excluding the Risk Adjustment User Fee and Transitional Reinsurance Program fee

The adjustment Impact of specific eligibility categories for the catastrophic plan is not applicable since CHLIC does not plan to offer catastrophic plans in 2016.

Note that the AV and cost-sharing adjustment encompasses expected cost-sharing differences and utilization differences due to differences in cost-sharing.

The expected cost-sharing ratio for each benefit plan is calculated by using group experience over the experience period (trended to the proposed filing period) to develop a claims probability distribution (CPD). This CPD is then used to estimate member cost-share vs. issuer cost-share for each benefit category and benefit plan.

In addition to cost sharing differences, this adjustment also includes utilization differences due to differences in cost sharing. In evaluating adjustment for utilization changes, CHLIC has relied on internal studies that used regression analysis at the major service category level, to develop a relationship between historical utilization and corresponding expected cost-sharing. This adjustment is consistent with the description on page 59 of the 2016 Unified Rate Review Instructions. There are no explicit and/or additional adjustments used in our rate development process that reflect expected differences in utilization due to health status.

b. Plan Adjusted Index Rate for the Experience Period

The Plan Adjusted Index Rate for the Experience Period has been included in row 58 on Worksheet 2 of the URRT. This represents the expected non-calibrated statewide average premium based on expected membership at time of 2014 Pricing. The Plan Adjusted Index Rate for the Experience Period differs from the average premium rate in Section 1 of Worksheet 1 due to the differences between projected and actual 2014 membership by age and geography.

16. CALIBRATION

CHLIC calibrates the Plan Adjusted Index Rates to apply the allowable rating factors (age and geography) in order to calculate Consumer Adjusted Premium Rates. The calibration for each allowable rating factor is described below.

a. Age Curve Calibration

The weighted average age factor for the projected membership was calculated using the Default Federal Standard Age Curve. The average age associated with this projected membership (rounded to the nearest whole number) is . This single risk pool average age was determined using a blend of the current 2015 age distribution in the single risk pool and 2015 market-wide enrollment data released by Covered California. The Plan Adjusted Index Rate was divided by the weighted average age factor mentioned above, to arrive at the calibrated Plan Adjusted Index Rate for a 21 year old. A demonstration of how the Plan Adjusted Index Rate and the age curve were used to generate the calibrated Plan Adjusted Index Rate for each plan is provided below.

b. Geographic Factors

Rate variations among geographical areas vary only by the geographic rating regions defined by the federal government. Area factors reflect only differences in the cost of the delivery of medical services among rating areas for a standard population and fixed market basket of covered services. The following table shows the geographic factors for each defined area in California:

An average geographic factor is developed based on the projected distribution of membership across all areas. Then the calibrated Plan Adjusted Index Rate is calculated as Plan Adjusted Index Rate divided by this weighted average geographic factor.

A demonstration of calibration for the Plan Adjusted Index Rate is provided in the table below.

^{*} The Plan Adjusted Index Rate represents average premium for the projected single risk pool at the unrounded average age, weighted using the best-estimate Default Federal Standard Age Curve factors. Linear interpolation between integer Default Federal Standard Age Curve factors was used in the development of the Demographic Calibration factor.

17. CONSUMER ADJUSTED PREMIUM RATE

Consumer Adjusted Premium Rate is developed by applying the following allowable adjustments to the calibrated Plan Adjusted Index Rate.

- Individual and family tier applied by summing the premiums for each individual family member, provided at most three child dependents under age 21 are taken into account
- Rating area factor applied by multiplying the area factors to the calibrated Plan Adjusted Index Rate
- Age factor applied by multiplying the age factor to the calibrated Plan Adjusted Index Rate

18. AV METAL VALUES

The AV Metal Values shown in Worksheet 2 of the URRT for the following plans were based entirely on the AV Calculator. Therefore, CHLIC has not submitted a Unique Plan Design justification for these plans.

HIOS Plan ID 40025CA0020002 40025CA0020005

The AV Metal Values shown in Worksheet 2 of the URRT for the plans listed below were based on the AV Calculator, with the exception of the following unique benefits for select plan designs:

- Cost-Sharing for Pharmacy Retail vs. Home-Delivery Service
- Outpatient Mental Health and Substance Abuse Services

These benefits were outside the scope of the AV Calculator and hence an alternate methodology was deemed necessary as per 45 CFR 156.135(b). The impacted plans, alternate methodologies, and the reason for their use is explained in the accompanying actuarial certification titled "Unique Plan Design Supporting Documentation & Justification".

HIOS Plan ID									
40025CA0020003	40025CA0020006								

19. AV PRICING VALUES

CHLIC is not incorporating any impact due to the different morbidity or health status of individuals who select certain plans in the derivation of the Pricing AV. See Section 15 in this document for an explanation of the factors used in the development of the Pricing AV.

20. MEMBERSHIP PROJECTIONS

The membership projections for CHLIC's benefit plans are developed internally as best estimates. They were derived from CHLIC 2015 open enrollment experience and assumed channel growth in California. Active membership splits were used to develop projections by metal tiers, together with growth assumptions by channel. The projected distribution of member months represents our expectation of the industry average distribution of enrollment by age for the Individual Market for 2016.

21. TERMINATED PRODUCTS

Table 1 below provides a summary of the actual plan mapping for 2014 through to 2016. For purposes of completing Sections III and IV on Worksheet 2 of the URRT, plans having the highest membership in the Experience Period were mapped to plans offered in the Projection Period. Table 2 below provides a summary of this mapping. Further, "terminated" plans that were offered in the Experience Period but were not mapped to plans offered in the Projection Period for the purposes of completing these sections in the URRT are shown in Table 3.

22. PLAN TYPE

The plan types as inputted in Worksheet 2, Section 1 of the URRT accurately describe the plans in this filing.

23. WARNING ALERTS

Row 67 & 72 – Per Worksheet 2 of the URRT, the Total Incurred claims payable with issuer funds equals allowed claims less all allowed claims which are not the issuer's obligation, including member cost-sharing, reinsurance and risk adjustment receivables or payables, and cost-sharing paid by HHS on behalf of low-income members. However, page 13 of the Universal Rate Review Instructions indicates that the Incurred Claims in Experience Period, as shown on Worksheet 1 of the URRT, is allowed claims less member cost-sharing and cost-sharing paid by HHS on behalf of low-income members. Therefore, cell F15 on Worksheet 1 of the URRT does not exclude expected receipts or payments to the reinsurance or reinsurance programs for 2014, while row 71 on Worksheet 2 does exclude these payments.

24. EFFECTIVE RATE REVIEW INFORMATION

a. Financial Information

Cigna Health & Life Insurance Company (CHLIC)												
(\$ Millions)	2011	2012	2013	2014	2015 (Proj)							
Post-Tax Stat Net Income	123	301	489	1,047	1,187							
Stat Capital & Surplus	543	1,018	1,714	2,800	3,123							
Asset Valuation Reserve	7	22	45	97	100							
Authorized Control Level RBC	44	172	355	480	591							
Dividend History	0	0	0	0	0							
Return on Equity	41%	38%	35%	46%	39%							

CHLIC is in strong financial condition. The YE 2014 ACL RBC ratio was 603%. In prior years when the company was significantly smaller, the RBC ratio was much higher. For the next few years, CHLIC is expected to maintain an ACL RBC ratio around 540%. The proposed plans and rates will have an immaterial impact on the company's financial condition, even with significant membership growth.

b. Rating Information

To see the proposed rate manual by age, area and smoking status please reference the accompanying QHP Rate Data Template. For additional rating rules used in deriving the premium please refer to the accompanying Business Rules Template.

A description of the benefits for all plans proposed in this filing is shown in the accompanying Plans Benefits Template.

Please note that CHLIC shall satisfy the requirement to offer coverage for all essential health benefits off-exchange by providing all applicants a medical policy that covers the pediatric dental benefit.

c. Other

CHLIC's anticipated loss ratio (without ACA adjustments) for the proposed plans in this filing is

25. RELIANCE

In preparing the Part 1 Unified Rate Review Template submission, I have relied on data and analysis provided by Brian Abrahamsen, Actuarial Senior Analyst. In addition, I have relied on external sources in order to develop the underlying assumptions for the development of the proposed premium rates.

26. ACTUARIAL CERTIFICATION

- I, Minhe Yu, am a Fellow of the Society of Actuaries and a Member of the American Academy of Actuaries. I certify, to the best of my knowledge and judgment, that:
 - a) The rates proposed in the above noted rate filing are
 - In compliance with all applicable State & Federal Statutes & Regulations (45 CFR 156.80(d)(1))
 - Developed in compliance with applicable Actuarial Standards of Practice, including but not limited to the following:
 - o ASOP #5, Incurred Health & Disability Claims
 - ASOP #8, Regulatory Filings for Health Plan Entities
 - o ASOP #12, Risk Classification
 - o ASOP #23, Data Quality
 - ASOP #25, Credibility Procedures Applicable to Accident & Health, Group Term Life, and Property & Casualty Coverages
 - ASOP #26, Compliance with Statutory & Regulatory Requirements for the Actuarial Certification of Small Employer Health Benefit Plans
 - ASOP #41, Actuarial Communications
 - Reasonable in relation to the benefits provided and the population anticipated to be covered
 - b) The Projected Index Rate presented in this filing is:
 - a. In compliance with all applicable state and Federal statutes and regulations in 45 CFR 156.80(d)(1)
 - b. Developed in compliance with the applicable Actuarial Standards of Practice
 - c. Reasonable in relation to the benefits provided and the population anticipated to be covered
 - d. Neither excessive not deficient
 - c) Plan level rates were generated using only the index rate and allowable modifiers as described in 45 CFR 156.80(d)(1) and 45 CFR 156.80(d)(2)
 - d) The geographic rating factors reflect only differences in the costs of delivery, including unit cost and provider practice pattern differences, and do not include differences for population morbidity by geographic area.
 - e) The percent of total premium that represents Essential Health Benefits included in Worksheet 2, Section IV, of the Part 1 URRT was calculated in accordance with applicable Actuarial Standards of Practice
 - f) The AV Calculator was used to determine the AV Metal Values shown in Worksheet 2 of the Part I URRT for all plans, save the exceptions shown in Section 18, which are further explained in the accompanying actuarial certification "Unique Plan Design Supporting Documentation & Justification".

The URRT does not demonstrate the process used to develop the rates presented in this filing. Rather, it represents information required by Federal regulation to be provided in support of the review of rate increases, for certification of Qualified Health Plans for Federally-facilitated Marketplaces, and for certification that the Index Rate is developed in accordance with Federal regulation and used consistently and only adjusted by the allowable modifiers.

Re: Cigna Health and Life Insurance Company NAIC Company ID#: 67369
Rate Filing for Individual Health Plans CACHIND012016 – Effective 01/01/2016

Dear Mr. Whitmarsh,

This rate filing contains requested premium rate changes for Cigna Health and Life Insurance Company's (CHLIC) ACA compliant Individual health plans. The proposed rates are intended to take effect on January 1, 2016. This filing affects the rates approved under SERFF tracking number CCGH-129566867.

Enclosed within this filing are the Unified Rate Review Submission, Part 3 Actuarial Memorandum, Rate Tables, Business Rules, Unique Plan Design Certification, and AVC Inputs files.

CHLIC requests confidential handling of this filing. We believe that this information is proprietary and critical to our business. The release of such information could be harmful if made public.

Please contact Brian Abrahamsen at 860.226.4404 or at Brian.Abrahamsen@Cigna.com with any questions or concerns.

Thank you for your attention.

Sincerely,

Minhe Yu, FSA, MAAA Actuarial Manager

Minhe Vu

Unique Plan Design Supporting Documentation & Justification

1. HIOS Issuer ID:

40025

2. HIOS Product ID(s):

40025CA002

3. Applicable HIOS Plan ID(s) (Standard Component):

40025CA0020003 40025CA0020006

4. Reasons the plan design is unique (benefits that are not compatible with the parameters of the AV calculator, and the materiality of those benefits):

In this section we have provided a description of the features of the plan designs that are considered unique and not compatible with the AV Calculator parameters along with a table that outlines which plans have these features.

The following features of the plan designs are considered unique and not compatible with AV Calculator parameters:

- Cost-Sharing for Pharmacy Retail vs. Home Delivery Service The proposed plans in this filing offer
 Home Delivery pharmacy prescriptions in addition to retail pharmacy prescriptions. Since the AV
 Calculator does not allow for separate cost share inputs for retail and home delivery pharmacy
 prescriptions, the cost share for the pharmacy benefit was not compatible with the existing parameters
 of the AV Calculator.
- Outpatient Mental Health and Substance Abuse Services The proposed plans in this filing offer coverage for outpatient mental health and substance abuse services in both an office visit setting and a facility visit setting. Since the AV Calculator does not allow for separate cost share inputs for outpatient mental health and substance abuse office and facility visits, the cost share for these benefits was not compatible with the parameters of the AV Calculator.

The following table illustrates which benefit plans contain these unique plan design features:

			Unique Plan Feature								
Metal Tier	Plan Name	Plan ID	Rx Retail vs Home-Delivery	Outpatient MHSA							
Bronze	Cigna Health Flex 6400	40025CA0020003	✓								
Silver	Cigna Health Flex 3000	40025CA0020006	✓	✓							

5. Acceptable alternate method used per 156.135(b)(2) or 156.135(b)(3):

In order to quantify the Actuarial Value of each unique plan feature, an alternate method per 156.135(b)(2) was used. In line with the proposed methodology of 156.135(b)(2), an estimate of the plan design feature was fitted into the AV Calculator to align with the Calculator's existing input parameters. Alternate methods per 156.135(b)(3) were not utilized.

6. Confirmation that only in-network cost-sharing, including multitier networks, was considered:

For the purpose of quantifying the Actuarial Value of each unique plan design, only In-Network cost sharing was brought into consideration. CHLIC did not account for Out-Of-Network cost sharing during this process.

7. Description of standardized plan population data used:

The standardized plan population data used for calculating the AV of plans with the Rx Retail vs. Home Delivery and Outpatient Mental Health and Substance Abuse unique plan features is the default standard population developed by HHS for AV calculation and provided as an underlying assumption to the Continuance Tables in the AV Calculator. In addition, for the pharmacy unique plan design features, as discussed in Section 8, internal national individual experience was used in order to develop the inputs entered into the AV Calculator.

8. If the method described in 156.135(b)(2) was used, a description of how the benefits were modified to fit the parameters of the AV calculator:

<u>Cost-Sharing for Pharmacy Retail vs. Home Delivery Service</u> – The cost-sharing for each tier was blended prior to being input in the AV Tool based on expected utilization patterns for retail pharmacy services as opposed to home delivery pharmacy services.

Outpatient Mental Health and Substance Abuse Services – A study was conducted to determine how to fit this unique plan design feature into the AV calculator. Based on the analyses performed, it was determined that the impact to the AV is not material. The definition of materiality used is consistent with the *Practice Note on Minimum Value and Actuarial Value Determinations Under the Affordable Care Act* issued by the American Academy of Actuaries in April 2014. In summary, the magnitude of the impact is minimal and no plans fell out of metal tier range. Given the study indicated that the majority of Outpatient Mental Health and Substance Abuse services are performed in an Office Visit Setting, the cost sharing amount applicable to Outpatient Mental Health and Substance Abuse services performed in an Office Visit setting was entered into the AV Calculator.

9. If the method described in 156.135(b)(3) was used, a description of the data and method used to develop the adjustments:

The method described in 156.135(b)(3) was not used.

Unique Plan Design Supporting Documentation & Justification

10. Certification Language:

The development of the actuarial value is based on one of the acceptable alternative methods outlined in 156.135(b)(2) or 156.135(b)(3) for those benefits that deviate substantially from the parameters of the AV Calculator and have a material impact on the AV.

The analysis was

- (i) conducted by a member of the American Academy of Actuaries; and
- (ii) performed in accordance with generally accepted actuarial principles & methodologies.
